Abstract

Thai Wacoal (PLC) is the lingerie manufacturer and distributor both in domestic and oversea. They have a lot of assets for supporting the company's process. In the present, they record asset's data in Microsoft Excel that trouble to find data and to make report. So I have be assigned to develop the Assets Management System which is developed web application by architecture. After testing by the executive managers, the result they have accepted and have given the good feedback.

Key words : Assets Management System / Web Application / Thai Wacoal (PLC)
