Abstract

Car service center is the provider about car maintenance. Each center have to compete to the best service. In the past they use web application technology to support car received department that had waste time to save the data twice times, fist on paper form and second on web page. In the present the mobile technology is very popular, therefore I have adopt this to develop car service application on Android platform. To reduce the process and increase performance of car receive department by using mobile application and web service technology.

Keywords : Car service center / Mobile application / Android platform
