Abstract

At first 8903 Steak Shop is small shop then, being more popular and extend by time. Practically, customers have to make their order only at the shop or by a phone call which is record any order by hand and that make mistake of missing file or overlap file. Because of having an order only by the shop sometimes products are out of stock and can not provide to demand of customers. As a result of the shop has no system to manage stock and inconvenience in ordering. The shop need to provide more option to make an order by online system. Providing more convenience meanwhile less time and lastly accurately to demand of customers. Not only for customer but also the shop to make an order of products before them terminate. The system is designed to checking stock which is develop by PHP language and managing data base by PHP My admin. The program was tested when it finished at 8903 Steak Shop by making online order from customer. The result was very impress because of its convenience and accuracy. Also for the shop because of more circulation and its performance to restore the products before termination. Conclude that insist of the program cause more efficiency to the shop.
